1. Find and install the official Cisco AnyConnect client on the Google Play Store.

2. When you run the program, select the column connections to create a new connection.

3. Think of a name that is convenient for you and specify the server address vpn2.vu.lt.

4. After creating a login:
   - Turn it on;
   - Enter your VU eID (eg 1234567) and valid your password;
5. a. Once connected, you will see the status "Connected" and you will be able to see the connection details in the "Details" section. **Attention!** Don’t forget to disconnect your VU VPN when you’re done.
