eduroam configuration in Apple macOS

Tutorial was made using Apple Mac OS X 10.6.x (Snow Leopard). In newer Mac OS X versions configuration process can slightly differ.

1. Being in eduroam reception zone:
   A. Select *AirPort* wireless utility;
   B. Select *eduroam*.

![Wireless Utility](image1)

2. Enter Your *eduroam* username and password:
   A. *eduroam* username (Your VU e-mail address);
   B. Password;
   C. Option *Remember this network* will enable autoconnect;
   D. Click *OK* to continue.

![Username and Password](image2)

3. Confirm `radius.vu.lt` authentication server security certificate:
4. For security certificate installation you will be prompted computer administrator username and password:

**A.** Enter Your *Mac OS X* system password ("Name" will be provided automatically);

**B.** Click *OK* to continue.

5. If all provided settings were correct, system will connect automatically. In *AirPort* settings:

**A.** You will be able to monitor *eduroam* status;

**B.** If initial configuration took longer period, system will not connect to *eduroam* from the first time (because of terminated authorization session). In this case first disable and then enable again wireless connection (*Turn AirPort Off & Turn AirPort On*).
