

VU Cisco AnyConnect VPN configuration in Android

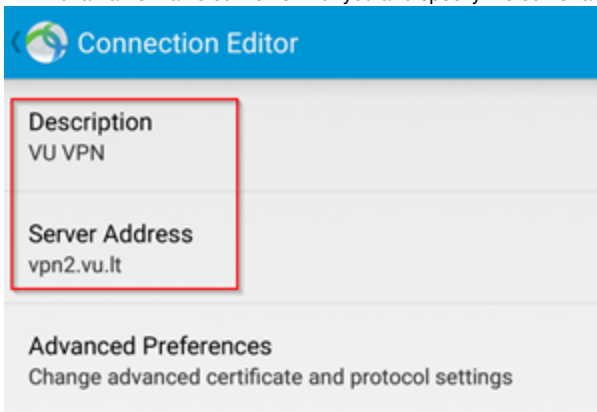

1. Find and install the official Cisco AnyConnect client on the Google Play Store

2. When you run the program, select the column connections to create a new connection.

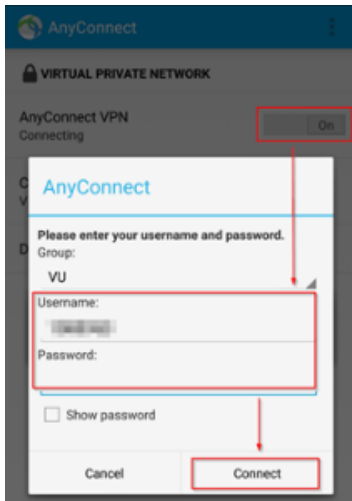

3. Think of a name that is convenient for you and specify the server address vpn2.vu.it

4. After creating a login:
 - Turn it on;
 - Enter your VU eID (eg 1234567) and valid your password;

- Click Connect.

5. a. Once connected, you will see the status "Connected" and you will be able to see the connection details in the "Details" section.
Attention! Don't forget to disconnect your VU VPN when you're done.
